

Industrial Internship Report on Full Stack Web Application Development

Prepared by: Susmitha Alladi

This report provides details of the Industrial Internship provided by upskill Campus and The IoT Academy in collaboration with UniConverge Technologies Pvt Ltd (UCT). The internship focused on Full Stack Web Application Development using ReactJS, Node.js, Express.js, and MongoDB.

Preface

This internship provided practical exposure to industrial software development and helped improve technical and professional skills.

Introduction

The project developed was an Online Student Management System to manage student data, attendance, and academic information through a centralized web application.

Technologies Used

Frontend: HTML, CSS, JavaScript, ReactJS

Backend: Node.js, Express.js

Database: MongoDB

Version Control: Git & GitHub

Problem Statement

Traditional student management systems are mostly manual and inefficient. The project aims to create a secure and centralized digital platform.

Existing and Proposed Solution

The proposed solution provides student registration, login authentication, attendance management, dashboards, and database integration.

Performance Testing

The system was tested for authentication, database operations, responsiveness, and API functionality.

My Learnings

Learned Full Stack Development, REST APIs, MongoDB integration, ReactJS components, teamwork, and project documentation.

Future Scope

Future improvements include cloud deployment, mobile app integration, AI-based analytics, and notification systems.

Technology	Purpose
ReactJS	Frontend Development
Node.js	Backend Runtime
Express.js	API Development
MongoDB	Database
GitHub	Version Control

Conclusion

The internship helped in understanding real-world software development processes and improved both technical and professional skills.
